Get Balance - Failed

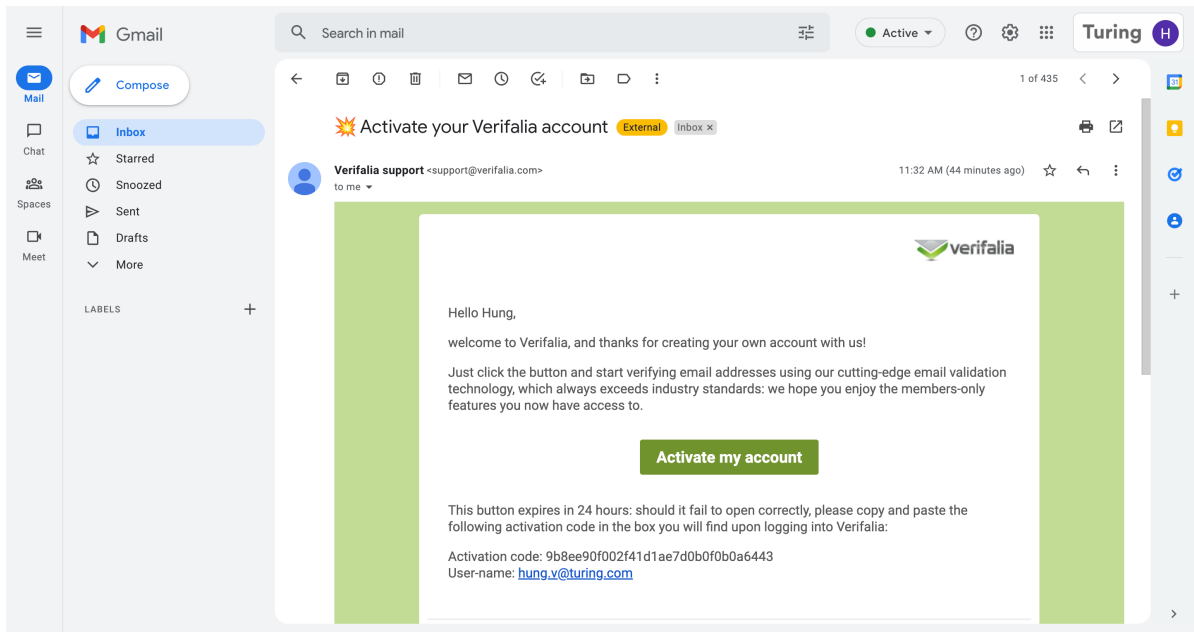

I get the successfully message, but I couldn't see any data (.i.e my current balance)

Delete Job - Skipped

I tried to login into Verifalia to create verification job and see job ID. But I'm stuck at the email activation step.

- I clicked to the email sent to me

- But accessing Verifalia - Client area, I still see the email activation screen. Tapping into the button **Need a new activation link? > request a new activation message** resulted in an error
