Sources

New Object (Instant) - Passed, Improvement needed

New Source for standard object (Account) - Passed

I can create a new source and new events were emitted

The screenshot displays the Salesforce Event Monitoring interface. The main header shows the event name 'New Object (Instant, of Selectable Type)' and its creation time '8 minutes ago'. Below the header, there are tabs for 'EVENTS', 'LOGS', and 'CONFIGURATION'. The 'EVENTS' tab is active, showing a list of events. The first event is highlighted, showing details such as 'BillingAddress: null', 'CleanStatus: Pending', 'CreatedById: 0058c0000000xSFAA1', 'CreatedDate: 2022-09-16T16:41:02.000+0000', 'Id: 0018c00002W3UFAAL', 'IsDeleted: false', 'LastModifiedById: 0058c0000000xSFAA1', 'LastModifiedDate: 2022-09-16T16:41:02.000+0000', 'LastReferencedDate: 2022-09-16T16:41:02.000+0000', and 'LastViewedDate: 2022-09-16T16:41:02.000+0000'. The 'User Id' is also listed as '0058c0000000xSFAA1'. Below the event details, there are sections for 'INTEGRATIONS', 'Workflows', and 'APIs'. The 'Workflows' section includes a 'CREATE WORKFLOW' button and a 'View Tutorial (1 minute)' link. The 'APIs' section provides information on managing sources and consuming event data using REST or SSE APIs.

New Source for custom object (Pipedream2339__c) - Passed

The screenshot shows the 'New Object (Instant, of Selectable Type)' configuration page. The left sidebar contains navigation icons and a 'DELETED ALL EVENTS' button. The main content area is divided into two panels. The top panel, titled 'EVENTS', shows a list of events with a filter for 'over last 24 hours' and two entries from 'Today' at 11:45 PM. The bottom panel, titled 'CONFIGURATION', shows the 'EVENT' details for a specific event (ID: a028c0000fc10AAU) and the 'INTEGRATIONS' section, which includes 'Workflows' (with 'CREATE WORKFLOW' and 'View Tutorial (1 minute)' buttons) and 'APIs' (with 'REST' and 'SSE' options).

I can create a new source and new events were emitted

Initial Historical events emitted - Improvement needed

Though when I deployed a new source, there're no initial historical events when I first deployed the source

The screenshot shows the 'New Object (Instant, of Selectable Type)' configuration page. The left sidebar contains navigation icons and a 'DELETED ALL EVENTS' button. The main content area is divided into two panels. The top panel, titled 'EVENTS', shows a filter for 'over last 24 hours' and a 'Waiting for event...' message with a 'Trigger webbook requests from your app' button. The bottom panel, titled 'CONFIGURATION', shows the 'SALESFORCE (REST API): NEW OBJECT (INSTANT, OF SELECTABLE TYPE)' configuration details, including 'Account: Salesforce (REST API) (Salesforce (REST API))', 'Object Type: Account', and 'EndPoint: https://a54573723d55b11d99ff412084042a4a.m.pipedream.net'. The 'INTEGRATIONS' section includes 'Workflows' (with 'CREATE WORKFLOW' and 'View Tutorial (1 minute)' buttons) and 'APIs' (with 'REST' and 'SSE' options).

Bug fix: the source can not be created - Skipped

Per the bug report here:

<https://github.com/PipedreamHQ/pipedream/issues/4166#issue-1361779075>, I can not reproduce the bug. Hence, I will skip it and communicate with the user to test on his side
