Create User Invite - Failed

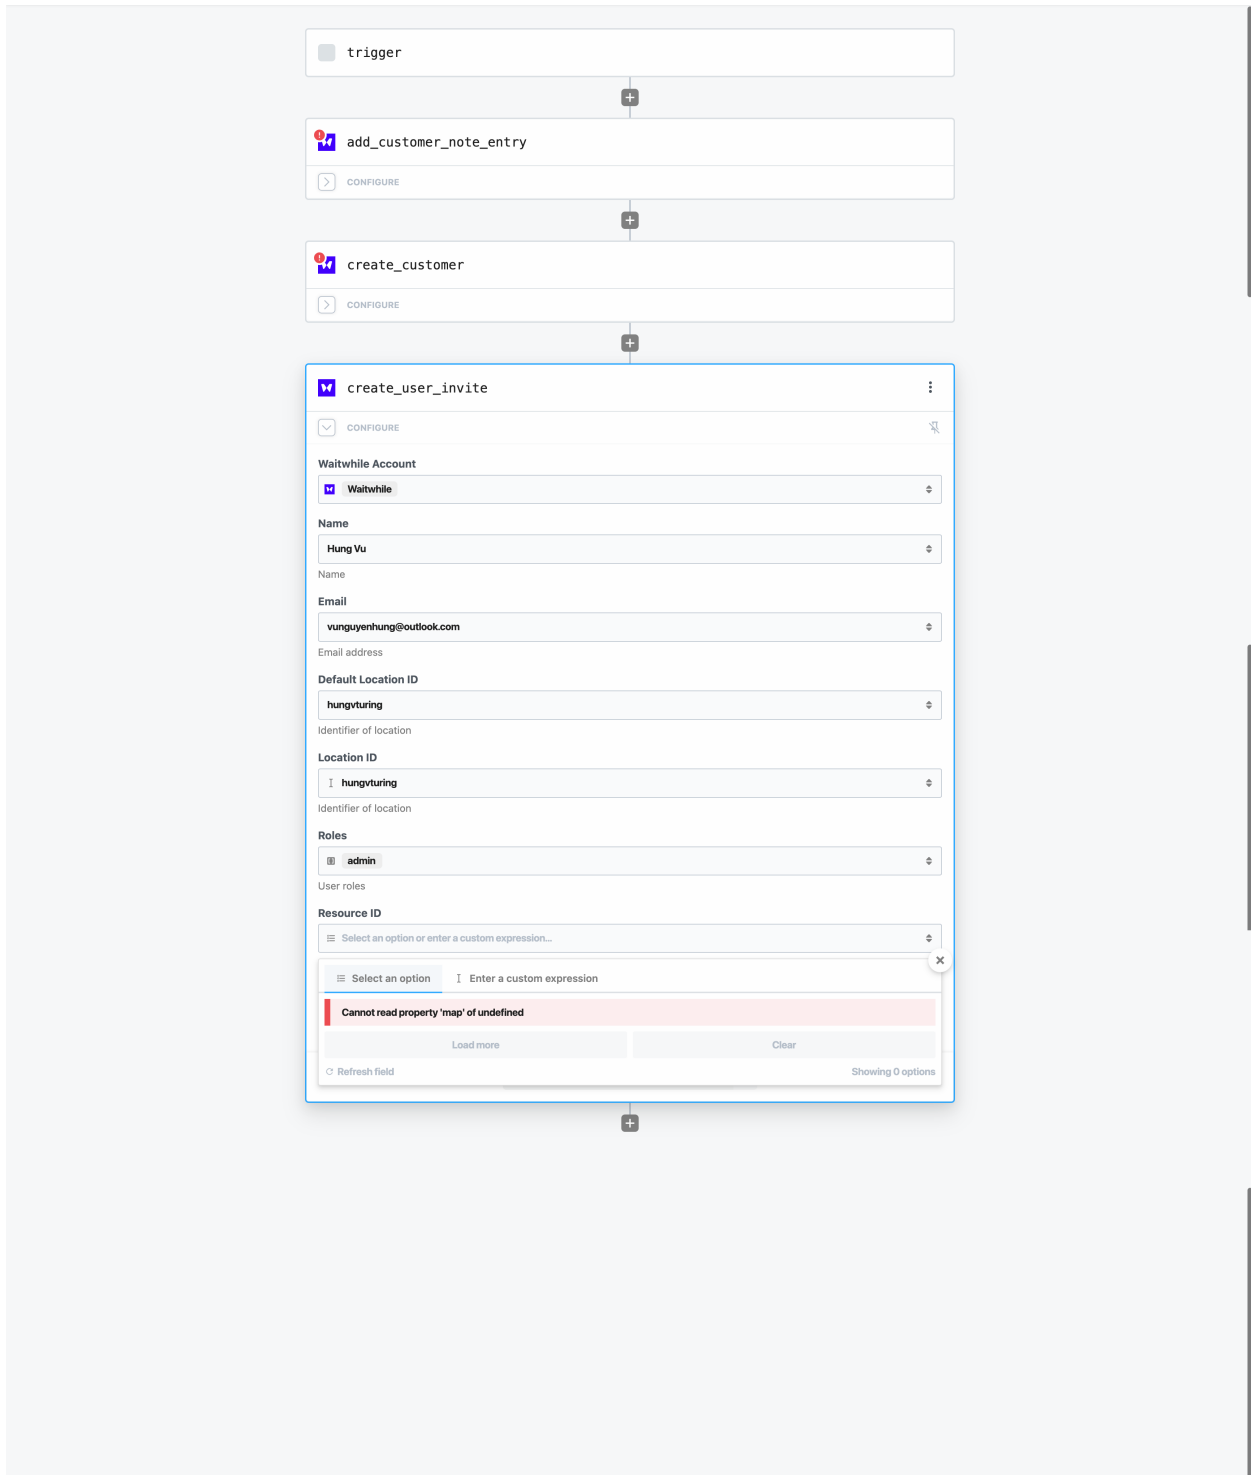

When selecting the Customer ID, I faced an error:

```
Cannot read property 'map' of undefined
```

When I tried to add the Location ID in text, I faced an error on Resource ID prop:

Cannot read property 'map' of undefined

Delete Customer Note Entry - Failed

When selecting the Customer ID, I faced an error:

```
Cannot read property 'map' of undefined
```

Export Customer - Failed

I faced an error when trying to publish the action

```
{"error":{"name":"UserError","message":"type missing for prop toTime"}}
```

```
+ pipedream (4057-Waitwhile-Actions) * pd publish /Users/Nguyen_Hung_Vu/Code/Personal/pipedream/components/waitwhile/dist/actions/export-customers/export-cus
tomers.mjs
Detected local requires, creating zip archive...
- actions/export-customers/export-customers.mjs
- app/waitwhile.app.mjs
component create api call responded with status: 400, body: {"error":{"name":"UserError","message":"type missing for prop toTime"}}
```

Import Customer - Failed

When selecting the Location ID, I faced an error:

Cannot read property 'map' of undefined

The screenshot shows a configuration window for 'import_customers'. It has a 'CONFIGURE' button and a 'Waitwhile Account' dropdown set to 'Waitwhile'. Below that is a 'Type' dropdown set to 'Customer'. The 'Location ID' dropdown is set to 'hungvturing'. A search bar is open with the error message 'Cannot read property 'map' of undefined'. The search bar has options for 'Select an option' and 'Enter a custom expression'. Below the search bar are 'Load more' and 'Clear' buttons. A 'Refresh field' button is at the bottom left.

After I manually input the Location ID and execute the action, I faced an error without much detail:

```
Error
[object Response]

DETAILS
  at global.handleError (/var/task/common.js:39:40)
```

I'm not sure how this action works, I assume we need to upload a file to send to Waitwhile

The screenshot shows a software interface for a process named 'import_customers'. It is divided into two main sections: 'CONFIGURE' and 'RESULTS'.
In the 'CONFIGURE' section, there are three dropdown menus: 'Waitwhile Account' set to 'Waitwhile', 'Type' set to 'Customer', and 'Location ID' set to 'hungvturing'. Below these is a 'Type' label and an 'Identifier of location' label.
The 'RESULTS' section shows an error message: 'Error [object Response]' with a 'DETAILS' link. Below the error is a tabbed interface with 'Inputs' selected. Under 'Inputs', there is a checkbox for 'Detailed/code mode' which is unchecked. A table lists the input values: 'Waitwhile Account' is 'Waitwhile', 'Type' is 'Customer', and 'Location ID' is 'hungvturing'. At the bottom, there are two buttons: a blue 'Test' button and a grey 'Test to deploy' button.

Get Customer Note ID - Failed

When selecting the Customer ID, I faced an error:

```
Cannot read property 'map' of undefined
```

List customer - Failed

I faced an error when trying to publish the action

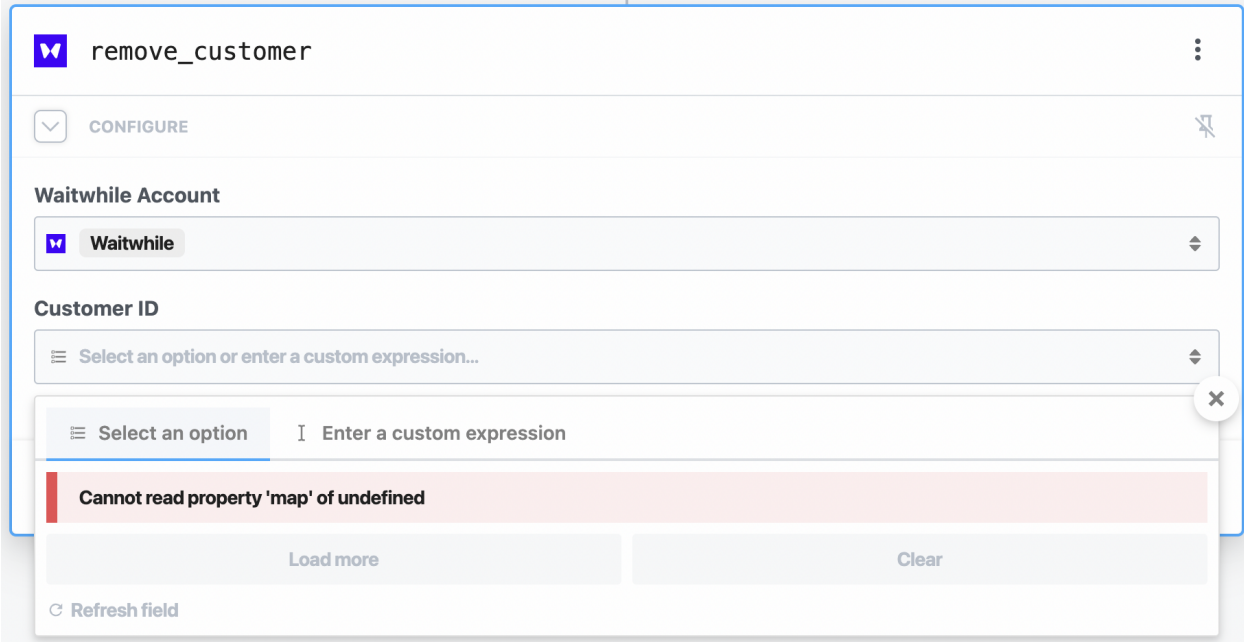

```
{"error":{"name":"UserError","message":"type missing for prop toTime"}}
```

```

- app/waitwhile.app.mjs
component create api call responded with status: 400, body: {"error":{"name":"UserError","message":"type missing for prop toTime"}}
```

Remove Customer - Failed

When selecting the Customer ID, I faced an error:

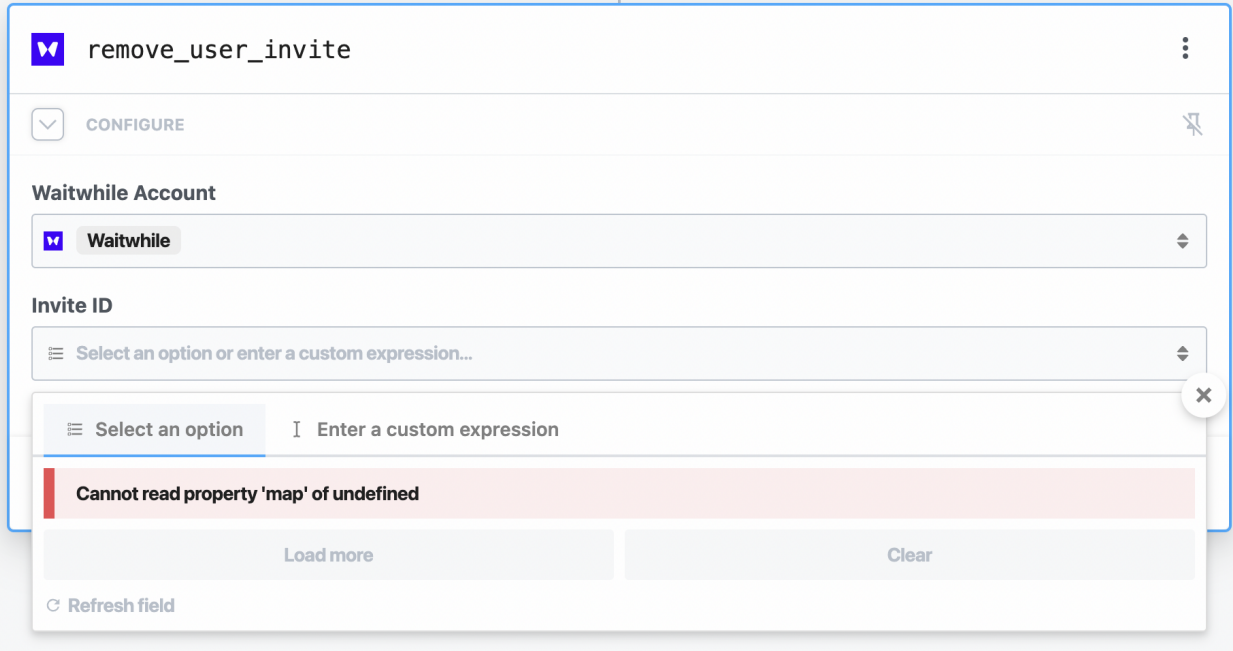

```
Cannot read property 'map' of undefined
```

Remove User Invite - Failed

When selecting the Invite ID, I faced an error:

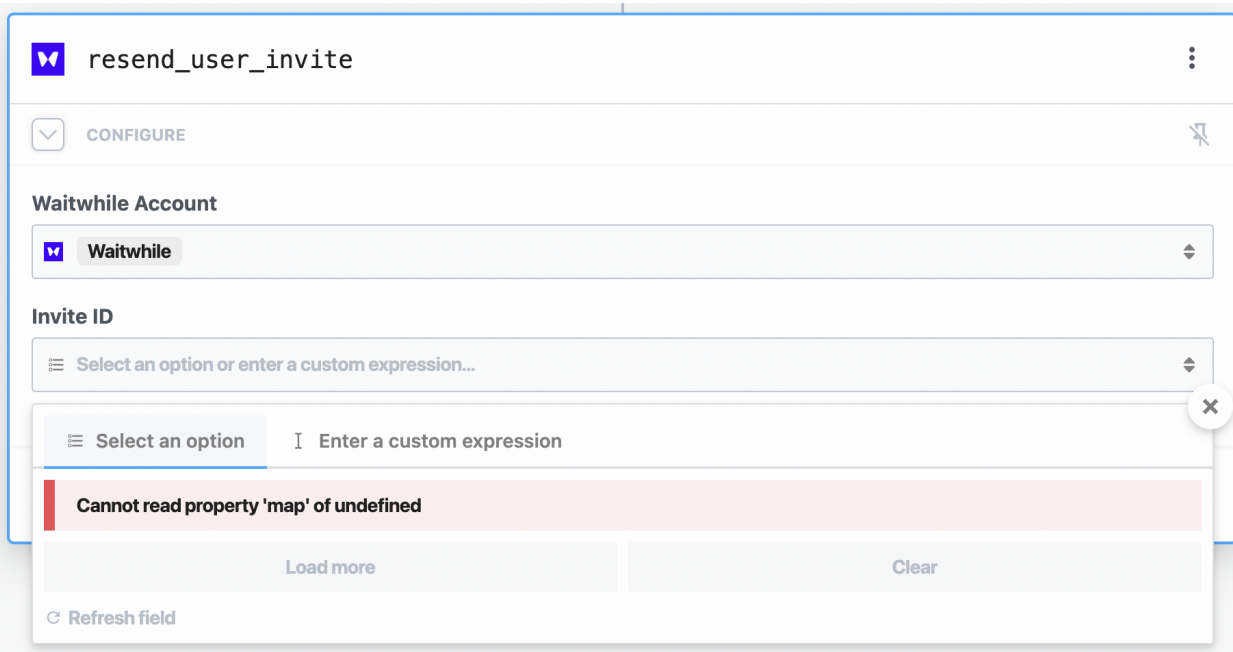

```
Cannot read property 'map' of undefined
```

Resend User Invite - Failed

When selecting the Invite ID, I faced an error:

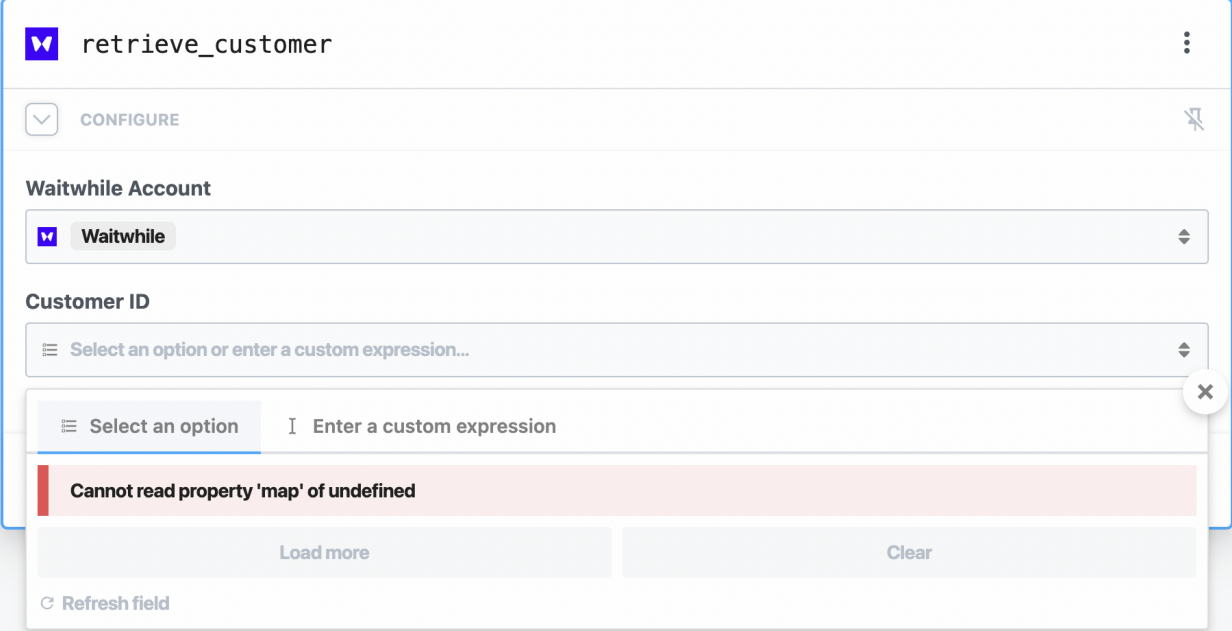

Cannot read property 'map' of undefined

Retrieve Customer - Failed

When selecting the Customer ID, I faced an error:

Cannot read property 'map' of undefined

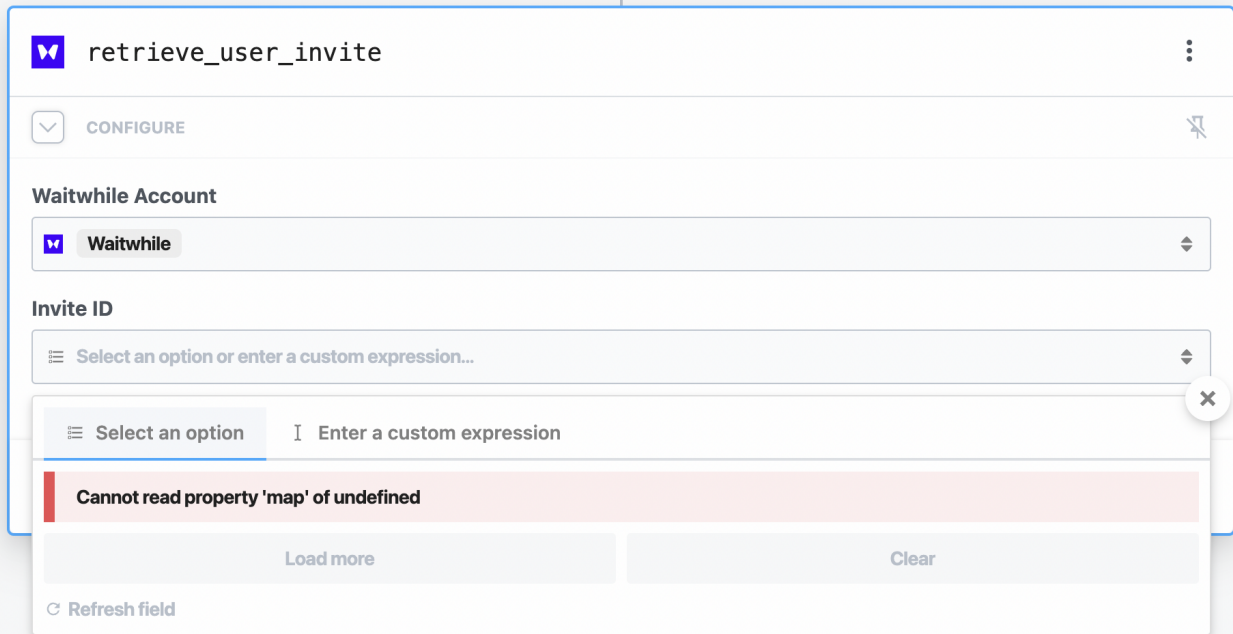

The screenshot shows a form titled 'retrieve_customer'. It has a 'CONFIGURE' dropdown menu. Below it, there are two dropdown menus: 'Waitwhile Account' with 'Waitwhile' selected, and 'Customer ID' with 'Select an option or enter a custom expression...' selected. A red error message is displayed below the 'Customer ID' dropdown: 'Cannot read property 'map' of undefined'. At the bottom of the form, there are 'Load more' and 'Clear' buttons, and a 'Refresh field' link.

Retrieve User Invite - Failed

When selecting the Invite ID, I faced an error:

Cannot read property 'map' of undefined

Search Customers - Failed

I faced an error when trying to publish the action

```
{"error":{"name":"UserError","message":"type missing for prop toTime"}}
```

```
